Try Cellsonic for yourself

After eight years in research and development a new hand held lithotripter is launched. What is new about it? It is cheaper because it is cleverly designed. Most of the components are British and final assembly is in India. It is better because it uses a spark gap to generate a shockwave in a liquid. This technique is called electro-hydraulic and creates the most sudden rise in decibels known to science. It is the suddenness and nothing else that is the most important feature of a lithotripter. For that reason, CellSonic Limited is not quoting energy levels and other strange numbers to give you a false impression. Quite simply, with this machine you can heal patients better and cheaper. Try it for yourself. If you are not using CellSonic you are either wasting money or failing your patients or both.

All the evidence about wound healing

Here is a list for you to download compiled by the ISMST of many medical papers about wound healing. CellSonic is a new machine so these papers will not refer to it and for that reason you can see that there is nothing unique about the CellSonic other than we have more features and a very much lower price. For patients wanting to be healed, for doctors wanting to see results and for administrators eager to save money, CellSonic answers your prayers.

Dr.Karim Bilal

An eminent surgeon, Karim Bilal, Fellow of the Royal College of Surgeons in England, has written a paper explaining that shockwaves can treat all wounds including skin cancer. No drugs are used so no side effects and no dangers from radiation as happens with most cancer treatments.
